

# Diogo Esteves

Staff / Principal Frontend & Platform Engineer. AI-native systems, enterprise UI infrastructure, scalable web architectures.

DE

Lisbon, Portugal · Remote (US-aligned hours) · [diogo.esteves.goncalves@gmail.com](mailto:diogo.esteves.goncalves@gmail.com) · [linkedin.com/in/diogo-esteves](https://linkedin.com/in/diogo-esteves) · [github.com/dgesteves](https://github.com/dgesteves)

## SUMMARY

I build the engineering systems behind ambitious products. Over the last 11+ years I've shipped frontend platforms and AI-native interfaces for organizations operating at very different scales: NBCUniversal's Peacock streaming service, BMW Group's innovation programs, Diligent's governance software for public-company boards, eino.ai's agentic network-planning platform, and digital-transformation work at Deloitte and Fueled.

The pattern across all of it: I'm the senior engineering voice on the surfaces users actually touch, plus the infrastructure underneath them. Design systems that survive multiple product lines. Monorepos that keep ten teams unblocked. AI workflows that hold up in production rather than impressing only in demos. Hiring, leveling, and architectural calls when companies need that altitude.

I'm equally comfortable as a Staff IC inside a large engineering org and as a founding-engineer or VP of Engineering inside a fast-moving AI startup. I've done both inside the last eighteen months.

*Targeting Staff+, Principal, or Founding Engineer roles, or VP / Head of Engineering mandates inside seed to Series B AI-native product companies.*

## CORE EXPERTISE

### Frontend Architecture & Platform Engineering.

Monorepos, micro frontends, build/runtime systems, federated UI, internal SDKs.

**AI-Native Product Engineering.** Agentic UX, RAG-backed flows, prompt orchestration, evaluation tooling, human-in-the-loop interfaces.

**Design Systems & UI Infrastructure.** Multi-framework component libraries, tokens, theming, contribution models, adoption strategy.

**Performance & Scalability.** Streaming UIs, geospatial and data-heavy interfaces, bundle and runtime optimization, release safety.

**Engineering Leadership.** Hiring bar, leveling, technical strategy, RFC culture, partnership with product, design, and executives.

**Developer Experience.** CI/CD, observability, build tooling, typed contracts, contribution governance.

**Enterprise Reliability & Security.** Accessibility (WCAG), compliance-aware UI, regulated environments (GRC, automotive, financial).

**Systems Thinking.** Turning product ambiguity into composable, evolvable architectures that survive a roadmap.

## TECHNICAL STACK

**Languages & Core Web.** TypeScript, JavaScript (ES2015+), HTML5, CSS3, Web Components.

**Frontend.** React, Next.js, Angular, RxJS, Redux, Zustand, React Query, Suspense / Server Components.

**Styling & UI.** TailwindCSS, Styled Components, CSS-in-JS, Radix, design tokens.

**Backend / Platform.** Node.js, Nest.js, Express.js, GraphQL (Apollo, urql), REST, BFF patterns, .NET Core / MVC (legacy).

**AI & Modern Tooling.** OpenAI APIs, RAG pipelines, vector search, prompt engineering, agentic workflow UX, evaluation tooling, AI-platform front ends.

**Architecture.** Monorepos (Nx, Turborepo class), micro frontends, design-system platforms, component-driven development, SSR / ISR / edge, event-driven UI.

**DevOps & Infra.** AWS, Vercel, Docker, GitHub Actions, Jenkins, CI/CD pipelines, observability (logs, metrics, traces), feature flags.

**Testing & Quality.** Jest, React Testing Library, Cypress, Playwright, contract and integration testing, visual regression.

**Practices.** Trunk-based delivery, code review culture, RFC-driven decisions, technical roadmapping, accessibility (WCAG), performance budgets.

## SELECTED EXPERIENCE

---

### **Fueled. Lead Engineer, Web Applications**

Dec 2025 to Present · Remote

*Fueled is a 300+ person digital strategy, design, and engineering agency. Its client roster spans Google, Apple, the BBC, the United Nations, MGM, Verizon, and Warner Music, alongside high-growth startups and mission-driven nonprofits.*

- Lead frontend architecture for enterprise-grade web applications across AI, media, and digital-transformation engagements with global brands.
- Set technical direction on React and TypeScript ecosystems, design-system reuse across client codebases, and AI-integrated product surfaces. Balance client constraints, agency timelines, and long-term maintainability.
- Operate as the senior engineering voice through discovery, scoping, and delivery. Partner with product, design, and account leadership to translate ambiguous client briefs into architectures that hold up after handover.
- Raise the bar on engineering velocity, code quality, observability, and developer experience across multiple parallel delivery pods.
- Ship production AI-augmented web platforms for enterprise audiences, including LLM-driven workflows, content intelligence, and internal tooling.

### **Moment. VP of Engineering**

Jun 2025 to Dec 2025 · Remote

*AI-first platform for organizational knowledge intelligence, automation, and programmable collaboration.*

- Owned technical vision, architecture, and the engineering organization for an AI-native platform moving from early product into production scale.
- Built and led cross-functional engineering teams across frontend, backend, AI/ML, and platform. Defined hiring bar, leveling rubric, and team topology.
- Architected the platform around AI-powered ingestion, enrichment, retrieval, and automation, with native support for agentic workflows and human-in-the-loop review.
- Stood up the engineering operating model: trunk-based CI/CD, observability, on-call, RFC process, and quality gates. Took the team from prototype velocity into production reliability without breaking shipping pace.
- Partnered directly with the CEO, founders, product, and design to turn business goals into shippable, instrumented systems and a credible long-range technical roadmap.
- Set the cultural tone: high-trust, async, opinionated, AI-native, shipping-oriented.

### **eino.ai. Lead Frontend Engineer**

Feb 2023 to Jun 2025 · Remote

*Eino.ai is a venture-backed AI startup (founded 2019) building the agentic, cloud-native platform for wireless network planning. RF engineers and enterprise networking teams use it to design, validate, and observe 5G, Wi-Fi, and private-wireless networks across warehouses, campuses, and large industrial sites. The platform combines digital-twin infrastructure with AI agents that turn plain-language requirements into RF designs, monitoring dashboards, and validation reports in seconds.*

- Led frontend architecture and product engineering for the flagship platform. The interface is dense, data-intensive, and unusual: map-based digital-twin visualization, real-time RF heatmaps, agent orchestration panels, and proposal generation flows that compress days of RF engineering work into minutes.
- Designed and built the React, TypeScript, and GraphQL foundation powering the planning, validation, and observability surfaces used by enterprise networking customers.
- Shipped agentic UX patterns ahead of broader industry adoption: natural-language network design, autonomous workflow execution with human override, and inspectable agent reasoning surfaces.
- Engineered scalable frontend foundations (modular feature architecture, typed data contracts, reusable visualization primitives) so feature velocity could keep up with a fast-moving research and product roadmap, without compounding architectural debt.
- Partnered closely with the CTO, design leadership, and AI engineering to align frontend execution with company strategy and shape how AI agents, digital twins, and human operators co-exist in the UI.
- Set the standard for performance, accessibility, and enterprise UX on a platform handling dense geospatial and RF datasets.

Stack. React · TypeScript · GraphQL · AWS · geospatial / mapping libraries · design systems · AI workflow UX

### **Superglue. Lead Frontend Engineer**

Mar 2022 to Feb 2023 · Remote

*B2B SaaS Partner Engagement Platform that automates partner-ecosystem growth and revenue enablement for SaaS companies. Used by partner teams at companies like Uberall to engage thousands of partners with real-time, AI-driven recommendations.*

- Owned the user-facing platform end to end as the senior frontend engineer in a small, high-leverage team.
- Built core SaaS surfaces: dashboards, recommendation flows, integration UIs, and partner-engagement workflows backed by automation and AI signals.
- Worked directly with founders, product, and design on prioritization, scoping, and technical strategy. Translated early-stage ambiguity into a coherent, opinionated product surface.
- Established frontend engineering standards (typed boundaries, component model, testing, CI) tuned for a small team that needed to ship fast without quality regressions.
- Left the codebase in a state where future hires could ramp and contribute predictably, instead of inheriting a fragile prototype.

### **Sky (NBCUniversal / Comcast). Senior Software Engineer**

Oct 2020 to Mar 2022 · Remote

*Sky is one of Europe's largest media companies, part of Comcast's NBCUniversal arm. I worked on large-scale streaming and media platforms including Peacock, NBCUniversal's flagship streaming service (live sports, NBC originals, news, films) serving tens of millions of subscribers across the US, plus high-traffic marketplace surfaces inside Sky's commerce portfolio.*

- Built and shipped React and Redux applications powering streaming and commerce experiences at multi-million-user scale, where reliability, latency, and resilience are first-class product requirements rather than nice-to-haves.
- Contributed to mission-critical streaming surfaces with strict uptime, performance, and device-compatibility constraints across web and connected-TV-class clients (browsers, set-top boxes, smart TVs).
- Improved frontend performance, resilience, monitoring, and production stability. Instrumented key flows and tightened release safety in CI/CD, in an organization where a regression hits millions of viewers within minutes.
- Operated inside agile, cross-functional pods alongside product, design, QA, and platform engineering, navigating the delivery cadence and quality gates of a large, regulated media organization.
- Helped evolve frontend tooling, coding standards, and technical direction across teams shipping Peacock TV and OLX Autos surfaces.

Stack. React · Redux · TypeScript · CI/CD · monitoring and observability tooling

## Diligent. Lead Frontend Engineer

Aug 2019 to Oct 2020 · Remote

*Diligent is the global category leader in governance, risk, and compliance (GRC) software. Its products (Diligent Boards, Entity Management, Risk and Audit, the Diligent One platform) are used by directors and executives at a large share of the Fortune 1000 and thousands of public companies, school boards, and government bodies worldwide.*

- Architected and shipped the company-wide enterprise design system that became the foundation for UI consistency across multiple GRC product lines and engineering teams.
- Built and published reusable NPM packages and component libraries spanning both React and Angular ecosystems. Maintaining a dual-framework component infrastructure at enterprise scale is a non-trivial problem, and the system needed to evolve with both stacks at once.
- Defined the contribution model, theming layer, and versioning strategy so product teams could adopt the system on their own cadence, without their roadmaps grinding to a halt.
- Worked across multiple product, design, and platform teams to standardize UI architecture and reduce cross-product UX drift in a regulated, compliance-sensitive environment.
- Materially raised frontend consistency, scalability, and engineering efficiency across the organization's enterprise portfolio.

Stack. React · Angular · TypeScript · design systems · NPM package architecture · Jenkins

## BMW Group. Lead Frontend Engineer

Sep 2018 to Aug 2019 · Munich (On-site)

*Innovation platforms inside one of the world's largest automotive groups. The BMW Crowd Innovation and Open Innovation platforms are used to source, evaluate, and manage strategic ideas across the BMW Group, tapping the swarm intelligence of internal engineers and external innovators on topics from future mobility and sustainability to connected vehicles and the Neue Klasse program.*

- Led frontend engineering and technical mentorship inside an enterprise innovation team. Participated in hiring and technical evaluation for the group.
- Architected and shipped scalable Angular and .NET Core applications powering BMW Crowd Innovation and Open Innovation. These are the systems through which strategic R&D challenges are launched, evaluated, and tracked across the BMW Group.
- Held the line on enterprise-grade security, scalability, and UX standards in an environment where data sensitivity, brand expectations, and product lifetimes are measured in years, not sprints.
- Helped shape technical direction for innovation tooling supporting future-mobility, sustainability, and connected-vehicle initiatives.

Stack. Angular 7+ · TypeScript · .NET Core · enterprise architecture

## Deloitte. Software Engineer

Jan 2016 to Sep 2018 · Lisbon (On-site)

*Deloitte is one of the Big Four professional-services firms. I worked across enterprise digital projects for clients in financial services, regulated industries, and analytics-heavy domains.*

- Built modern web applications and advanced data-visualization interfaces for enterprise clients with non-trivial domain models and large datasets.
- Engineered React and Redux front ends backed by .NET MVC services. Set patterns for API integration, maintainability, and consistency that other teams reused.
- Worked closely with product, design, and consulting teams to turn complex domain models into clear, performant interfaces that non-engineers could actually use.
- Built an early reputation for technical depth, ownership, and the ability to operate independently inside large, structured organizations.

Stack. React · Redux · JavaScript · .NET MVC

## HIGHLIGHTED PROJECTS

---

### AI & Platform Engineering

- **Eino.ai Network Planning Platform.** Agentic, digital-twin-based RF network design and observability for enterprise wireless. Led frontend architecture, agentic UX patterns, and the

visualization surfaces RF engineers use to design 5G, Wi-Fi, and private - wireless networks across large industrial sites.

- **Moment AI Platform.** AI -first organizational knowledge ingestion, retrieval, and automation. Owned engineering vision and execution as VP of Engineering: architecture, hiring, operating model.
- **AI-Augmented Enterprise Web at Fueled.** LLM-driven workflows, content intelligence, and internal tooling delivered to enterprise clients across media, technology, and digital-transformation programs.

## Enterprise Design Systems & UI Infrastructure

- **Diligent Enterprise Design System.** Multi-framework (React and Angular) component ecosystem, NPM-based distribution, adopted across multiple GRC product lines used by directors and executives at thousands of public companies and Fortune 1000 enterprises.
- **Cross-Product UI Standardization.** Contribution models, governance, and theming for regulated enterprise environments where audit, accessibility, and brand consistency are not optional.

## Streaming & Media Platforms

- **Peacock TV (NBCUniversal).** Frontend contributions to NBCUniversal's flagship streaming service: live sports, originals, news, and films served to tens of millions of subscribers across web and connected-TV clients. Worked on performance, reliability, and release safety on surfaces where regressions are visible in minutes.
- **OLX Autos.** High-traffic marketplace surfaces inside Sky's commerce portfolio.

## Innovation & Automotive Platforms

- **BMW Crowd Innovation & Open Innovation.** Enterprise innovation and idea-management platforms used to launch strategic R&D challenges across the BMW Group, including programs feeding future-mobility, sustainability, and connected-vehicle initiatives.

## Enterprise Data & Analytics (Deloitte)

- Advanced data-visualization interfaces and React/Redux front ends for clients in financial services and regulated industries, designed for non-engineer end users with serious domain complexity.

## LEADERSHIP & COMMUNITY

---

- **Founder, WebDevPortugal.** Built and grew a professional community for web engineers and technology professionals across Portugal.
- **President & Co-Founder, Northern Grade E-Sports.** Led initiatives helping young Portuguese players access international competitive gaming and tournament opportunities.
- **Mentorship & Hiring.** Routinely involved in technical interviewing, leveling, and engineering coaching across employers (BMW, Diligent, eino.ai, Moment).

## EDUCATION

---

**ISEL, Instituto Superior de Engenharia de Lisboa.** Engineer's Degree, Computer Engineering. 2015 to 2018

*Computer Science · Software Engineering · Multimedia Systems · Artificial Intelligence · Interactive Systems*

**Universidade Lusófona.** Bachelor of Laws (LLB). 2011 to 2014

## LANGUAGES

---

Portuguese (native). · English (professional / fluent).

## WHAT I'M OPTIMIZING FOR

---

Staff+, Principal, or Founding Engineer roles at AI-native product companies, frontend-platform teams, and remote-first engineering orgs in the OpenAI, Anthropic, Vercel, Linear, Ramp, and Stripe class. Equally open to VP or Head of Engineering mandates inside seed to Series B AI startups where architectural taste, hiring leverage, and execution speed compound.
